

## ***Welcome to the Computer Lab at Saint Rose of Lima Catholic School!***

Technology is an essential component of the overall curriculum at Saint Rose of Lima Catholic School. We believe the tools of technology support all areas of education. I work in conjunction with classroom teachers and specialists to integrate technology into the classroom curriculum. I encourage my students to use technology to enhance life-long learning.

- Pre-K to Grade 5 students visit our school computer lab weekly for technology lessons and instruction. Students are guided toward developmentally appropriate web-based programs and learning games that support the curriculum. They work on coding and keyboarding also. We instruct our students on the responsible use and application of technology.
- Middle school students learn advanced technology skills and have expanded educational opportunities. Technology is fully integrated into the classroom, teaching and homework. Our Middle school students use GoogleApps for Education, which gives them access to e-mail and shared documents. Through the use of GoogleApps, the students are able to communicate with teachers more effectively, complete assignments online, work in a group setting remotely, and gain knowledge of the most current use of cloud technology. As with our elementary students, Middle School students are instructed on the responsible use and application of technology.

The best way to contact me directly is through my school e-mail. Please feel free to reach out should you have any questions or concerns.
